

# future now

## Innovations shaping tomorrow

Deutsche Welle presents 20 trendsetting projects that we can use to change our lives now - and not sometime in the distant future. DW focuses on leading German research institutions with portraits in seven languages (German, English, Spanish, Chinese, Russian, Arabic and Indonesian) on television, radio and the project's website [dw-world.de/futurenow](http://dw-world.de/futurenow). future now highlights the significance of research in Germany and the international relevance of German research around the world.

The scientists being highlighted are looking to create solutions to pressing issues in the areas of environment, health, communication and mobility - innovatively and application oriented. How will we live in the future? How will we communicate? How will we get from point A to point B? Will we be able to find remedies for incurable diseases? future now provides answers.

International teams of reporters from Deutsche Welle research each of the projects and present them in a "future lab" at [dw-world.de/futurenow](http://dw-world.de/futurenow) - including articles, images, audio and video content in seven languages. Radio and television features will provide background stories to each of the projects and WebDocs complete the in-depth coverage online.

future now is being supported by the German Federal Ministry of Education and Research (BMBF). Become a part of the "future now" movement and help us spark the interest for research and innovation. Do you have colleagues or students who would be interested in this new series? Point them to the "future now" website or forward them our e-mail.
